

ISO CONTAINER FALL ARREST POST

Ref: 8563161

The unique CE certified fall arrest solution:

- **Compatible with all ISO certified containers**
- **Provides an elevated anchorage point reducing fall clearance requirements**
- **Ensures total fall protection solution, even while working on a single container**
- **No tools or container modification required**

ISO CONTAINER FALL ARREST POST

Ref: 8563161

The 1.25 m ISO Container Fall Arrest Post provides an increased height anchorage point. When used in combination with a Nano-Lok™ SRL, in case of fall, free fall will be greatly reduced and the required clearance will be minimal at 1.8 m.

Even while working from the height of a single container the ISO Post and Nano-Lok™ combination will allow for a safe working environment. This would not be the case with traditional methods of connecting at the surface level of the container.

The installation of the Post is very simple:

- Open the Post clamp arms
- Insert Post into ISO container corner casting
- Close clamp arms
- Once installed the post is a fully certified CE EN 795 Class B anchorage point

The SRL connects to the Post, through a big sized D Ring, which ensures the SRL hook won't be cross-loaded in the event of a fall.

The carrying handle allows for convenient transportation and installation.

The ISO Container Post is certified to the latest update of the EN 795 standard: version 2012.

Certification: CE EN 795 cl B: 2012

Weight: 12 kg, Height: 1.25 m

Compatible with all ISO certified containers

Materials: Aluminium and HR mild steel, epoxy paint power coated, bright green colour

Capacity: 1 user, 141 kg maximum

Applications: Any application requiring workers to be on the top of an ISO Container: inspection, repair, maintenance, equipment fitting (refrigeration):
